SUMMARY

Security Professional with direct hands-on experience in real-world ransomware remediation and a focus on Digital Forensics and Incident Response (DFIR). Combines 2 years of dedicated cybersecurity operations with 6 years of technical IT experience. Proven track record containing live threat actors, architecting Splunk log pipelines, and conducting forensic email/payload analysis across 150+ endpoints. Skilled in Sentinel One, Wazuh, EDR/SIEM orchestration, and scripting in PowerShell, Python, and Bash.

CERTIFICATIONS

CompTIA Security+, Network+, CySA+, CSAP, ITF+

SKILLS

Security Operations (SOC): Microsoft Sentinel, Splunk Enterprise, AlienVault OTX, SentinelOne EDR, Wazuh SIEM/XDR, VirusTotal, GoPhish

Identity & Cloud Security: Entra ID, Microsoft Intune, Active Directory, RBAC, Least Privilege, MFA, Email Forensics (SPF/DKIM/DMARC)

Automation & Scripting: PowerShell, Python, Bash, Security Orchestration

Networking & Infrastructure: pfSense, WireGuard, VLANs, Firewalls, VPN Management

Vulnerability & Compliance: NIST Frameworks (CSF/800-53), Nessus Scanning, HIPAA/PCI Compliance, DRP/AUP/SOP Documentation

Systems Management: NinjaOne RMM, AWS, Azure, Linux (Ubuntu/Debian), Windows/macOS Administration

CYBERSECURITY EXPERIENCE

FMRS Health Systems – Cybersecurity and IT Specialist – Beckley, WV

Nov 2024 – Present

- **Incident Response & Triage:** Mitigated a live ransomware outbreak following a 3-month adversary dwell time; utilized FEMA ICS 100 principles to contain the blast radius, coordinate system restoration, and minimize clinical downtime.
- **SIEM Engineering & Operations:** Architected and deployed a Splunk Enterprise SIEM instance on a custom-built Linux server; concurrently managed alerts and correlation rules across Splunk and Microsoft environments to monitor over 150 endpoints by strategically optimizing and repurposing existing hardware assets.
- **Email Security & Threat Analysis:** Conducted detailed header and payload forensics (SPF/DKIM/DMARC validation, link sandboxing) on user-reported phishing attempts, updating email security gateway controls to mitigate credential harvesting vectors.
- **Storage Engineering:** Engineered a high-velocity storage backend utilizing Linux LVM to aggregate disparate physical hardware into a unified and optimized high-performance storage pool dedicated to Splunk log indexing and retention.
- **Endpoint Security Automation:** Automated fleet-wide security agent deployment by developing custom PowerShell scripts executed via NinjaOne RMM; successfully deployed Sentinel One, Wazuh, and Splunk across 150+ endpoints to significantly reduce Mean Time to Respond (MTTR).
- **Security Awareness & Phishing Mitigation:** Reduced organizational phishing risk by 20% by designing custom GoPhish simulations and engineering automated remedial training workflows utilizing custom HTML redirects.

- Identity & Access Management (IAM): Hardened organizational security posture by enforcing Least Privilege access controls and Role-Based Access Control (RBAC) for 300+ users across Entra ID, specifically mitigating identity-based attack vectors. By doing so I made our detection of identity attacks able to be found 3 times faster and effectively neutralizing Identity based attacks
- Governance, Risk, & Compliance (GRC): Spearheaded accreditation and compliance readiness by authoring Disaster Recovery Plans (DRP), Acceptable Use Policies (AUP), and Standard Operating Procedures (SOPs) aligned with healthcare regulatory frameworks. By doing so we were able to secure a 10% increase in funding and 20 percent in compliance auditing scoring
- Vulnerability Management & Threat Intel: Led end-to-end vulnerability management and threat hunting operations utilizing SentinelOne, Splunk, VirusTotal, and AlienVault OTX to continuously identify, analyze, prioritize, and remediate critical security flaws and malicious indicators across clinical infrastructure. Ensuring false positives or true positives can be remediated 25% faster.

TECHNICAL & COMPLIANCE EXPERIENCE

Alpha Engineering Services – Engineering Analyst – Mabscott, WV

Oct 2023- Feb 2024

- Data Parsing & Compliance: Parsed, sorted, and analyzed complex technical datasets to optimize airflow metrics, maintaining strict alignment with regulatory compliance and safety standards.

Ibex Global Solutions – Production Support Specialist – Beckley, WV

May 2019 – Oct 2023 ; Feb 2024 – Nov 2024

- Data Privacy & IAM: Enforced PCI-DSS and HIPAA data protection controls across sensitive PII/PHI environments; managed user access controls and identity provisioning across enterprise and hybrid infrastructures.
- Root-Cause Analysis: Conducted root-cause investigations on complex system escalations, streamlining operational workflows and reducing recurring incidents by 30%.

EDUCATION

West Virginia Junior College – Associate of Applied Science in Cybersecurity (Honors) Graduated

PROJECTS

- Local LLM & MISP Threat Intelligence Pipeline: Built an automated threat intelligence automation framework integrating MISP, Splunk Enterprise, and a locally hosted LLM; automated IOC ingestion and query enrichment to deliver real-time, AI-analyzed threat reports and alert notifications directly to a private Discord Webhook.
- GoPhish: A practical phishing simulation setup using GoPhish to improve security awareness. Includes custom phishing email templates, a mock Microsoft login page, and an educational landing page. Hosted on a Linux server and designed to help organizations identify and train users against phishing attacks.
- Azure Free Tier Honeypot + Microsoft Sentinel Logging: My goal wasn't to build something secure — it was to *observe* attackers, learn from live attack data, and get more familiar with Sentinel and Azure tools.
- **Email Security & Malware Analysis Lab:** Conducted static and dynamic forensic analysis on malicious samples; extracted IOCs (IPs, malicious domains, payload hashes) from email headers and body content to generate YARA rules and document attack vectors.
- **Enterprise Vulnerability Management & Nessus Lab:** Deployed and configured Nessus Professional in a isolated lab environment to execute authenticated and unauthenticated vulnerability scans across Windows and Linux hosts; analyzed scan telemetry to identify critical CVEs, misconfigurations, and missing patches, authoring prioritized remediation reports based on CVSS scoring and risk context.
- Infrastructure Modernization: Built and deployed modern web infrastructure and network configurations for local small businesses and non-profit organizations.
- Community Outreach: Organized and participated in technical charitable initiatives, utilizing 3D printing workflows to manufacture custom resources for children in need.
