SUMMARY

Security Professional with direct hands-on experience in real-world ransomware remediation and a focus on Digital Forensics and Incident Response (DFIR). Combines 2 years of dedicated cybersecurity operations with 6 years of technical IT experience. Proven track record containing live threat actors, architecting Splunk log pipelines, and conducting forensic email/payload analysis across 150+ endpoints. Skilled in Sentinel One, Wazuh, EDR/SIEM orchestration, and scripting in PowerShell, Python, and Bash.

CERTIFICATIONS

CompTIA Security+, Network+, CySA+, CSAP, ITF+

SKILLS

Security Operations: Microsoft Sentinel, Splunk, SentinelOne EDR, Wazuh SIEM, GoPhish, VirusTotal

Cloud & Identity: Entra ID, Active Directory, Intune, RBAC, MFA, Email Forensics (SPF/DKIM/DMARC)

Automation/Scripting: PowerShell, Python, Bash

Networking & Infra: pfSense, WireGuard, VLANs, Firewalls, VPN Management

GRC & Vulnerability: NIST CSF/800-53, Nessus, HIPAA, PCI-DSS, DRP/AUP/SOP

CYBERSECURITY EXPERIENCE

FMRS Health Systems – Cybersecurity and IT Specialist – Beckley, WV

Nov 2024 – Present

- **Incident Response & Triage:** Mitigated a live ransomware outbreak following a 3-month adversary dwell time; applied FEMA ICS 100 principles to isolate compromised hosts, coordinate system restoration, and prevent clinical downtime.
- **Email Security & Threat Analysis:** Conducted detailed header and payload forensics (SPF/DKIM/DMARC, link sandboxing) on user reports, neutralizing 30+ phishing campaigns and updating email gateway controls to block credential harvesting.
- **SIEM & Storage Architecture:** Architected a production Splunk SIEM on custom Linux hardware, building a 1TB LVM storage pool from repurposed drives to ingest logs across 150+ endpoints, cutting detection times by 35% and saving \$10k+.
- **Endpoint & Agent Automation:** Engineered custom PowerShell deployment scripts executed via NinjaOne RMM to automate fleet-wide rollouts of security agents across 150+ endpoints, reducing agent deployment times to under 4 hours and lowering MTTR by 40%.
- **Identity & Access Management (IAM):** Hardened organizational posture by enforcing Least Privilege and Role-Based Access Control (RBAC) for 300+ users in Entra ID, accelerating identity attack detection by 3x and neutralizing unauthorized escalation risks.
- **Security Awareness & Phishing Mitigation:** Reduced organizational phishing susceptibility by 20% by designing targeted GoPhish simulations and engineering automated remedial training workflows featuring custom HTML redirects.

- **Governance, Risk, & Compliance (GRC):** Spearheaded accreditation readiness by authoring Disaster Recovery Plans (DRP), Acceptable Use Policies (AUP), and healthcare SOPs, securing a 10% funding increase and raising compliance audit scores by 15%.
- **Vulnerability Management & Threat Intel:** Led end-to-end vulnerability triage and threat hunting using SentinelOne, Splunk, VirusTotal, and AlienVault OTX, accelerating overall threat triage and remediation speed by 25% for critical security flaws.

TECHNICAL & COMPLIANCE EXPERIENCE

Alpha Engineering Services – Engineering Analyst – Mabscott, WV
Oct 2023 – Feb 2024

- **Data Parsing & Compliance:** Parsed, sorted, and analyzed complex technical datasets to optimize airflow metrics, maintaining strict alignment with regulatory compliance and safety standards.

Ibex Global – Production Support – Beckley, WV
May 2019 – Oct 2023, Feb 2024 – Nov 2024

- **Privacy & IAM:** Enforced PCI-DSS and HIPAA data protection controls across sensitive PII/PHI environments; managed user access controls and identity provisioning across enterprise and hybrid infrastructures.
- **Root-Cause Analysis:** Conducted root-cause investigations on complex system escalations, streamlining operational workflows and reducing recurring incidents by 30%

EDUCATION

West Virginia Junior College – Associate of Applied Science in Cybersecurity (Honors) Graduated

PROJECTS

- **Local LLM & MISP Threat Intelligence Pipeline:** Built an automated threat intelligence framework integrating MISP, Splunk, and a local LLM to ingest IOCs and post real-time AI-analyzed threat alerts to Discord.
- **GoPhish:** A practical phishing simulation setup using GoPhish to improve security awareness. Includes custom phishing email templates, a mock Microsoft login page, and an educational landing page. Hosted on a Linux server and designed to help organizations identify and train users against phishing attacks.
- **Azure Free Tier Honeypot + Microsoft Sentinel Logging:** Deployed an exposed cloud honeypot environment to capture live adversary telemetry and built custom KQL queries in Microsoft Sentinel to analyze attack trends and IP origins.
- **Email Security & Malware Analysis Lab:** Conducted static/dynamic forensic analysis on malicious email payloads and extracted IOCs to author custom YARA detection rules.
- **Enterprise Vulnerability Management & Nessus Lab:** Deployed and configured Nessus Professional in a isolated lab environment to execute authenticated and unauthenticated vulnerability scans across Windows and Linux hosts; analyzed scan telemetry to identify critical CVEs, misconfigurations, and missing patches, authoring prioritized remediation reports based on CVSS scoring and risk context.
- **Infrastructure Modernization:** Built and deployed modern web infrastructure and network configurations for local small businesses and non-profit organizations.
- **Community Outreach:** Organized and participated in technical charitable initiatives, utilizing 3D printing workflows to manufacture custom resources for children in need.
